Tare: 145kg

WLL: 1100kg

Specifications:

Size 2

To suit 13 - 18 ton excavator

Tare: 320kg

WLL: 1500kg

Yabby

This attachment has been designed by **Harrybilt Engineering** to be used with a rotating head to maximise its versatility over a wide range of operations in areas such as Environmental Waste Management, Civil Works, Building Industry and Landscaping & Grounds Management.

It is designed to be as light and compact as possible (no links or plates to weld to dipper arm) to make it attractive as an attachment for excavators and backhoes etc in order that their lifting capacity is not overly reduced, while at the same time being as strong as possible to provide trouble free operation throughout its working life. The bypass design allows closing down to 100mm dia pick up.

Customised Yabbys available to order
